

WatchGuard Dimension

BRINGING BIG DATA VISIBILITY TO NETWORK SECURITY

From the C-level office to network administration, business decisions need to be made at light speed. The only effective way to make these decisions in the 21st Century? **Visibility.**

DATA ANALYSIS IS THE KEY

Businesses are drowning in oceans of data, including network security data, making it nearly impossible to identify important security issues and make better policy decisions. The impact on regulatory compliance status can be devastating.

WatchGuard Dimension resolves these challenges by instantly turning raw network data into actionable security intelligence – in the big data visualization style today's users have come to expect.

PUBLIC AND PRIVATE CLOUD-READY

WatchGuard Dimension is a cloud-ready network security visibility solution that comes standard with WatchGuard's flagship Unified Threat Management platform. It provides a suite of big data visibility and reporting tools that instantly isolate and distill key security issues and trends, speeding the ability to set meaningful security policies across the network.

The solution is up and running in a few clicks and is easy to use and understand. Thanks to a menu of diverse visibility and reporting options, you'll find that information can be presented in the way that each user finds the most intuitive.

START WITH THE BIG PICTURE

Get a high-level view of network activity that pinpoints top trends, top clients, and correlated views of top users and applications. Then with just a click, you can drill all the way down to individual log data that reveals key details.

"Data in itself is not valuable at all. The value is in the analyses done on that data and how the data is turned into information..."

*Mark van Rijmenam,
Big-Data Strategist*

Threat Map

Instantly see by location where threats are coming from. A few clicks will tell you exactly which IP to block to protect your network.

Executive Dashboard

Reviewing massive amounts of data makes effective analysis impossible. Organize your thoughts around crystal clear data points in the dashboard.

THE POWER OF VISUALIZATION

FireWatch filters traffic in a way that instantly brings your eye to the most critical information on active users and connections.

FireWatch easily answers

- Who consumes the most bandwidth?
- Are there unusual traffic patterns?
- What is the most popular website visited?
- Which applications are used by specific workers?
- Which applications consume the most bandwidth?

Maximum flexibility

You have the option to pivot, drill-down, and filter to get exactly the information you need, when you need it.

FINDING PATTERNS, MAKING BETTER DECISIONS

You can choose from more than 70 comprehensive reports, with the ability to pre-schedule reports for email delivery to key stakeholders in your organization. Options include summary and detail views, and special reports for HIPAA and PCI compliance. The Executive Report is a high-level summary tailored for C-level executives, IT directors, compliance officers, and small business owners.

ZERO INSTALL

No complicated setup required. Simply import a virtual appliance – includes OS, database, utilities, and WatchGuard server software.

Visible proof

Have the information you need, presented in your choice of report types, to quickly identify issues, solve problems, and set effective policy.

Seeing is believing. Visit www.watchguard.com/dimension today to see more.
